SOFTWARE ENGINEER

Computer Engineering undergraduate with a strong foundation in software development, web technologies, and engineering problem-solving, complemented by hands-on experience developing responsive web applications using HTML, CSS, and JavaScript. Currently advancing into backend and full-stack development, with a growing understanding of software architecture, APIs, databases, version control, and modern software development practices. Skilled at translating ideas and requirements into practical, user-focused solutions through structured thinking, debugging, and continuous improvement. Demonstrates strong critical thinking, analytical problem-solving, adaptability, collaboration, and attention to detail, with a commitment to building reliable, scalable, and maintainable software. Aspires to contribute to high-impact engineering teams while continuously developing expertise across the software development lifecycle.

TECHNICAL SKILLS

- **Programming & Web**: JavaScript (ES6+), Typescript, SQL, HTML5, CSS3
- **Frontend Technologies**: React, Responsive Web Design, Tailwind CSS, HTML5, CSS3
- **Backend Technologies**: Node.js, Express.js, Authorization/Authentication, API, Postman, Next.js
- **Database Systems**: MySQL, PostgreSQL
- **API Development:** RESTFul API Design, GraphQL, Swagger/OpenAPI, Postman
- **Testing & QA:** Test-Driven Development (TDD), Unit Testing, Integration Testing xUnit
- **DevOps & Version Control:** Git, GitHub, CI/CD Pipelines, Azure DevOps
- **Development Tools:** Git, GitHub, VS Code, Swagger, Postman
- **Development Methodologies:** Agile, Scrum, Kanban, Pair Programming, Code Reviews, SOLID Principles, Design Patterns

SELECTED PROJECTS

Frontend Dev/Website, Chips Food Website

July 2026 – Present

- Designed and developed a functional food-focused website using HTML, CSS, and JavaScript, building the frontend structure, styling system, and interactive user features.
- Applied responsive design principles to create layouts that adapt across desktop and mobile screen sizes while maintaining usability and visual consistency.
- Implemented JavaScript-driven interactions and user interface behavior, debugging frontend issues to ensure reliable functionality throughout the application.
- Structured and organized HTML, CSS, JavaScript, and project assets to maintain a clean, scalable, and easily navigable frontend codebase.
- Identified and resolved layout, styling, and functionality issues through iterative testing and debugging, strengthening practical problem-solving skills.

- Focused on creating an intuitive and visually appealing user interface and user experience (UI/UX) while translating design ideas into functional web pages.
- Used the project to build practical experience in frontend architecture, responsive web development, JavaScript, debugging, and maintainable code organization.

Frontend Dev/Website, My portfolio

September 2026 – Present

- Conceived and developed a personal portfolio platform using HTML, CSS, and JavaScript, transforming a collection of projects, skills, and experience into a structured digital representation of my technical capabilities and career direction.
- Designed the information architecture around the needs of recruiters, collaborators, and technical professionals, organizing projects, skills, experience, and contact information to make important information easy to discover and navigate.
- Applied creative UI/UX thinking to establish a distinct visual identity, carefully balancing typography, spacing, visual hierarchy, navigation, and interactive elements to create a professional developer-focused experience rather than a conventional static webpage.
- Engineered responsive layouts that adapt content presentation across desktop, tablet, and mobile environments, considering how navigation, project information, typography, and interactive elements should behave across different screen sizes.
- Iteratively refined the interface through visual testing, debugging, and design evaluation, identifying usability, layout, and presentation issues and implementing targeted solutions to improve the overall user experience.
- Treated the portfolio as an evolving software product rather than a one-time webpage, structuring the codebase and frontend assets to support future projects, technical skills, achievements, functionality, and continued design improvements.

EDUCATION

- **Bachelor of Engineering (B.ENG)**

Michael Okpara University of Agriculture, Umudike (MOUAU), Nigeria | September 2023 – July 2028

Relevant coursework: Logic and Critical Thinking, Data Analysis, Research Methodology

SOFT SKILLS

- **Problem-solving:** Analyze challenges logically and develop practical, effective solutions.
- **Adaptability:** Quickly learn new technologies, tools, and processes in changing environments.
- **Teamwork & collaboration:** Contribute to team projects while working with others with diverse skill sets to achieve shared goals.
- **Communication:** Effectively communicate technical concepts to non-techinical stakeholders.
- **Attention to details:** Maintain accuracy and consistency when developing projects and completing tasks.
- **Critical Thinking:** Approach complex problems with structured reasoning, challenge assumptions, evaluate evidence, and develop well-informed solutions based on logic and analysis.
